SnTe[001] 40L

“Cut” a TB-slab ?

Construct a supercell

“Turn off” its inter-supercell hopping terms

SnTe bulk

SnTe[001]

How to construct a TB-supercell ?

Find **positions of atoms**
and **unit cell of slab**

Select the **hopping terms**
from bulk information

“Attach” the atoms through
these hopping terms

SnTe bulk

SnTe[001]

Slab with different termination?

Change unit cell

Shift atoms' fractional coordinates

Transform TB-Model into Wannier rep.

**Transform TB-Model back into Bloch rep.
using new coordinates**

Slab with different termination?

Construct a Slab with an **extra layer**

Select the atoms
above the desired termination

“Turn off” the hopping terms
involving these atoms

The hard way: attaching extra ATOMS ...
